

9/8/2017

Dear Sharon Winton,

This letter serves as official verification that you completed the following online webinar from Cornell Lab of Ornithology:

Webinar: **Starting a School Garden for Birds**

Session: 9/17/2017

Contact Hours: 1 hour

Start the school year with a mission to get your students outside. What better way than with a garden! School gardens provide the context for lessons across subjects and offer a wonderful opportunity to engage students in hands-on, project-based learning. Students who engage in school gardening are likely to experience academic, physical, emotional, social, and even behavioral benefits. School gardens not only benefit students, but they can also benefit birds!

In this webinar, educators will:

- Learn the key steps to setting up and maintaining successful school gardens.
- Discover how simple changes and additions can make a garden more bird friendly.
- Address several challenges school gardeners may face.
- Learn about the BirdSleuth Garden Grant application process.

Thank you for your participation. If I can be of further assistance please contact me.

Sincerely,

Jennifer Fee
